DevOps Engineer at Globant

Observability Ecosystem
in Kubernetes: Metrics,
Logs, and Traces with
open source tools

Conf42 Kube Native 2023

Thursday • September 28th • 5PM GMT

CONF42

Who is JhonnyPong (Jhonnatan Gil)

Just a human who loves Linux, share knowledge and very passionate about tech in general especially with make more easy every life that needs deploy in local mode on prem or bare metal and any other environment

@jthan24

“Life is really simple, but we insist on making it complicated..”

Confucius

Observability Ecosystem in Kubernetes: Metrics, Logs, and Traces with open source tools

Observability

Observability

Observability is a system property that defines the degree to which the system can generate actionable insights. It allows users to understand a system's state from these external outputs and take (corrective) action.

o11y

o11y Golden triangle

Logs Unstructured data that provides a record of events and actions within a system.

Metrics Structured data that provides a quantitative measure of a system's performance or behavior

Traces A record of the interactions between components or services within a distributed system.

Why observability.....

Instrumentation

Instrumentation is a collective term for measuring instruments, used for indicating, measuring and recording physical quantities. It is also a field of study about the art and science about making measurement instruments, involving the related areas of metrology, automation, and control theory. The term has its origins in the art and science of scientific instrument-making.

03

CNCF

How they are

The Cloud Native Computing Foundation (CNCF) hosts critical components of the global technology infrastructure.

We bring together the world's top developers, end users, and vendors and run the largest open source developer conferences. CNCF is part of the nonprofit Linux Foundation.
