- Contributing to the success
- Q&A

The Challenge of Doing Azure Demos

Challenges you face today (in doing Azure Demos)

- No time to create demos
- No idea what a 'functional' demo means
- No view on cost of a scenario-based demos
- I use Azure QuickStarts, but missing apps
- I use Azure QuickStarts, but they are outdated
- I use GitHub repo search, but a lot of them are not maintained
- Quickstart deploys usually, but it's not really offering a demo scenario
- I want data samples for my SQL and Fabric demos
- I want sample apps for AI courses, not just showing terminal output
- ...

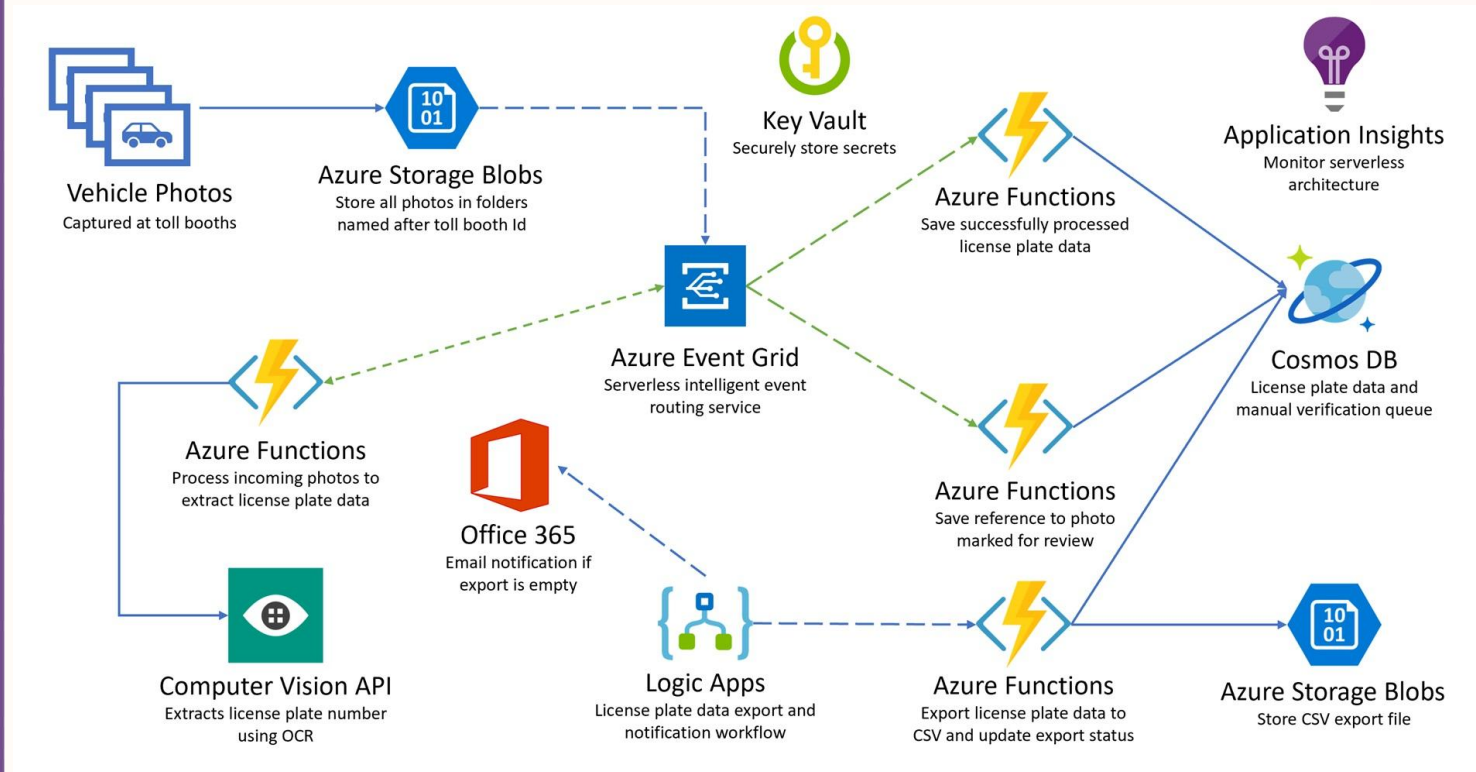

Azure Workload Sample Scenario

- ❑ Azure Vnet
- ❑ Azure Disks
- ❑ Azure Virtual Machi

- ✓ Azure CLI
- ✓ Infrastructure as Code (IaC)

Azure Workload Sample Scenario

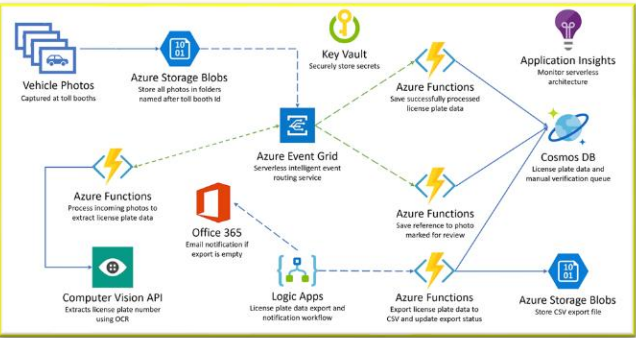

- ☐ Azure Storage Account
- ☐ Azure Event Grid
- ☐ Azure Functions
- ☐ Azure AI Services
- ☐ Logic Apps
- ☐ CosmosDB
- ☐ Application Insights
- ☐ Key Vault

✓ Azure CLI
✓ Infrastructure as Code (IaC)

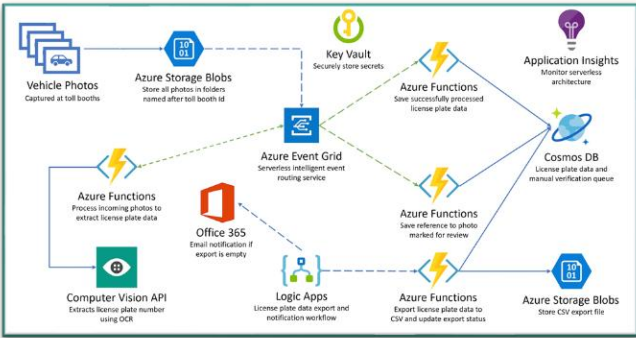

✓ App Deployment (Manual, CLI,...)

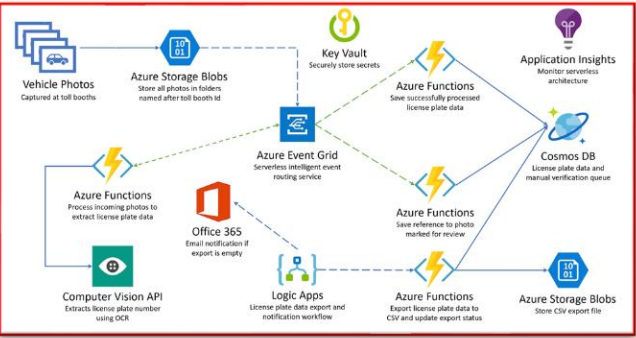

Azure Workload Sample Scenario

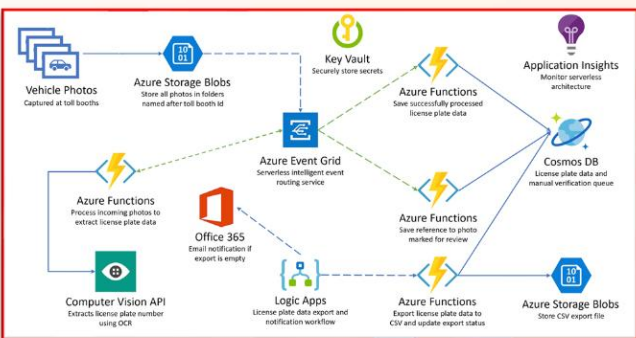

Dev - EastUS

Dev2 - EastUS

Live Demo – EastUS2

POC @ customer – WestUS

- ✓ Azure CLI
- ✓ Infrastructure as Code (IaC)

- ✓ App Deployment (Manual, CLI,...)

This scenario is based on the official Microsoft Azure Sentinel Training Lab Resource, which deploys an Azure Sentinel environment with sample data. More information on how to use the prebuilt scenario, but also how to extend it with more features and data, can be found at <https://github.com/Azure/Azure-Sentinel/tree/master/Solutions/Training/Azure-Sentinel-Training-Lab>
Estimated Deployment Time (min): 18.00 Scenario Rating: ★★★★★

EShopOnWeb Retail in IAAS
This scenario deploys the IAAS EShopOnWeb website. The architecture is based on a WebVM (IIS, 2019) and SQLVM (SQL 2019, Win2019). After deploying, the environment contains the following: - VNET, SubNet, NSG, WebVM and SQLVM with Custom Extensions, WebVM gets a Public IP-address
Estimated Deployment Time (min): 22.34 Scenario Rating: ★★★★★

Hub Spoke with VPN Gateway and JumpVM
This scenario deploys an Azure VNET Hub & Spoke architecture including VNET Peering, VPN Gateway and a Windows Server 2016 JumpVM
Estimated Deployment Time (min): 34.25 Scenario Rating: ★★★★★

Catalog Features

- ✓ Search scenario titles
- ✓ Filter based on Azure Services and/or MOC Courses
- ✓ Share Feedback!
- ✓ Detailed scenario cards

The screenshot displays the 'Trainer Demo Deploy Catalog' website. At the top, there's a navigation bar with links: 'Trainer Demo Deploy', 'Catalog', 'BYOD - Azure', 'BYOD - Copilot Studio', 'FAQ', and 'Contribute'. A 'Share feedback' button is also present. The main heading is 'Trainer-Demo-Deploy Catalog' with the subtitle 'Open-sourced, azd-based scenarios for Microsoft ILT courses.' Below this is a search bar with the placeholder text 'Find your next Azure training demo...'. A note states: 'Every template deploys with the Azure Developer CLI (azd). New to azd? [Learn more in the official AZD docs.](#)'

The 'Filter by' section on the left includes a 'Clear' button and a count of '81 of 81 templates'. The filters are categorized as follows:

- Filter by:**
 - ☐ hot
 - ☐ MCT Authored
 - ☐ MTT Authored
 - ☐ New
- Azure Services:** (dropdown arrow)
- ILT Courses:** (dropdown arrow)
- Industry:** (dropdown arrow, currently showing 'General')
- Frameworks:** (dropdown arrow)
- Authors:** (dropdown arrow)

The main content area displays four scenario cards, each with a title, author, description, associated Azure services/MOC courses, and a deployment command.

- Card 1:** 'AI Foundry Agent Service with Bing Search Grounding and OpenAI Deep Research LLM' by Peter De Tender. It includes tags for 'AI-102 Azure AI Engineer Associate', 'AI-900 Azure AI Fundamentals', 'Azure AI Service', and 'Azure AI Foundry'. The command is 'azd init -t petender/azd-researcher'.
- Card 2:** 'AI Language Services for Hospitality' by Peter De Tender. It includes tags for 'AI-102 Azure AI Engineer Associate', 'AI-900 Azure AI Fundamentals', 'Azure App Service', and 'Azure CosmosDB'. The command is 'azd init -t petender/tdd-ai-language-services'.
- Card 3:** 'API Management with ConferenceAPI' by Peter De Tender. It includes tags for 'AZ-204 Azure Developer Associate', 'AZ-305 Azure Solutions Architect', 'Azure App Service', and 'Azure API Management'. The command is 'azd init -t petender/azd-apimwithconfAPI'.
- Card 4:** 'API Management with ConferenceAPI and OAuth' by Rob Foulkrod. It includes tags for 'AZ-204 Azure Developer Associate', 'Azure App Service', 'Azure API Management', and '.NET'. The command is 'azd init -t rob-foulkrod/azd-apimwithconfAPI-OAuth'.

Scenario Card Features

The screenshot shows a scenario card titled "AI Language Services for Hospitality" by Peter De Tender. It includes a list of related topics like "AI-102 Azure AI Engineer Associate" and "Azure App Service". The card has tabs for "Template Details", "Demo Guide", "Course Blueprint", and "Legal". The "Template Details" tab is active, showing a brief description of the app, cost and time estimates, deployment prerequisites, and a list of CLI commands for deployment.

DEMO

- Trainer Demo Deploy Catalog
- Use Catalog Scenarios for your demos

Agentic Demo Builder

We can't do an AI session and not talk about agents!!!

From prompt to end-to-end scenario

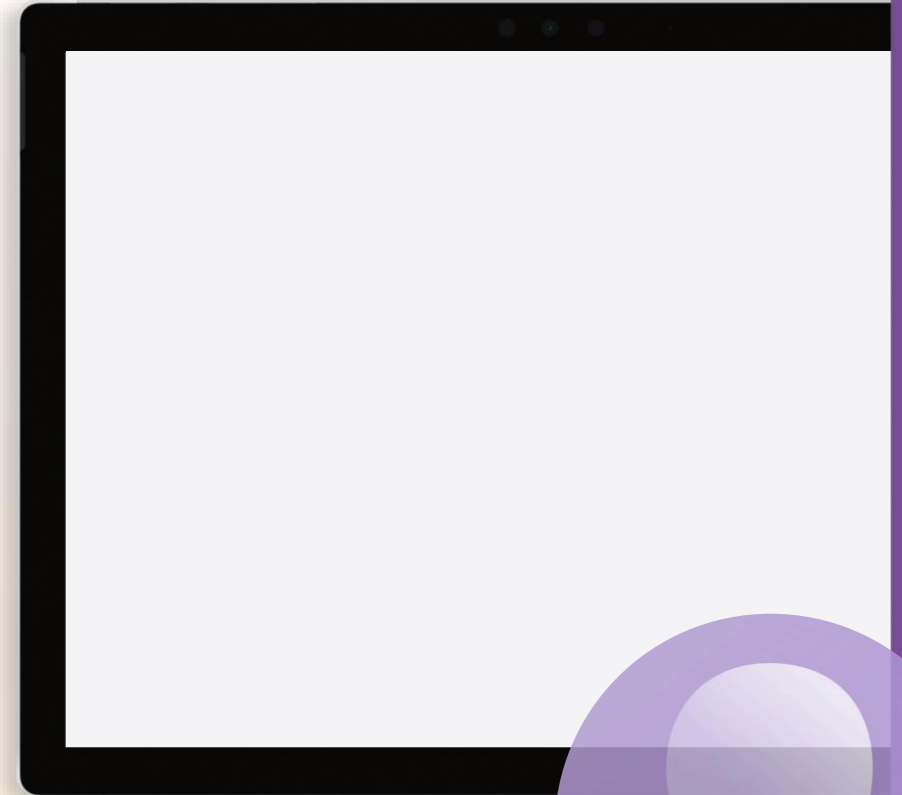

- GitHub Copilot .agents and SKILL.md collection
- Generates end-to-end artifacts
- Architecture design (based on prompt input)
- If app resource layer – develops custom app
- Industry-specific workload example
- Bicep template (AVM modules)
- Runs AZD-scenario deployment (=validation)
- Writes demo guide
- Contributes back to the catalog (optional but appreciated!)

DEMO

- Agentic Demo Builder

Contribute To The Success

Remember, it's fully Open-Sourced

- Define compelling demo scenarios (outline, story), relevance to a MOC Course / module
- Transform demo story into Azure assets (diagram building blocks)
- Compose AZD-artifacts (=the actual bicep, sample data, apps,...)
- Write/Update demo guides
- Validate AZD deployments
- Publish objects into Gallery (GitHub PR)

=> All and any of the above 😊

Thank you!

Building better. Deploying faster. One DevOps pipeline at the time.
